

We are Green Key certified

Adina

By implementing specific environmental conservation behaviours in the hotel and integrating sustainability into the overarching corporate culture, we are taking decisive steps towards a more sustainable future for Adina Hotels Europe.

We are now Green Key certified. This global, independent certification recognises that we are taking various measures to reduce our environmental impact in all areas of our operations. For more information about Green Key visit [greenkey.global](https://www.greenkey.global)

The majority of our energy comes from sustainable sources and all our Adina Hotels in Europe are powered by 100% green electricity.

Our team is at the centre of everything we do and is key to our sustainability journey. Through sustainability training and the formation of Green Teams in all Adina Hotels in Europe, collaboration and a sense of responsibility among employees is strengthened. These teams promote sustainable initiatives and implement projects independently.

We have various regional, Fairtrade and organic-certified products in our breakfast buffet and reduce plastic consumption by using reusable packaging and less individual packaging. We also offer vegetarian and vegan alternatives and fresh herbs that you can pick yourself.

Environmentally friendly room cleaning: To save water and reduce the use of cleaning products, we carry out a full room clean every three days. When needed rooms can be cleaned and towels changed earlier, just let our team know what you need. Only eco-certified products are used for cleaning work.

As a guest, you can also help to make the world a little more sustainable. If you have any questions or need tips on environmentally friendly behaviour during your stay, our team is always available to help. You can find more information about our long-term strategic ESG goals [here](#) or ask your question directly to esg@adina.eu.
